Saama Training & Enablement:
Built for Adoption, Designed for Impact

At Saama, training isn't an add-on- it's a core part of our delivery. We recognize that AI-powered platforms introduce new ways of working, and true impact is only possible when users are equipped to navigate that change. Our enablement programs are designed to support every phase of the client journey; from onboarding and rollout to scaling adoption and long-term proficiency.

A Strategic Differentiator

Our enablement capabilities signal a commitment not just to platform deployment, but to long-term customer success and adoption.

We deliver:

- A catalog of **25+ eLearning modules** across core and advanced areas of the Saama Platform

- **Developer workshops** with assessments to evaluate and reinforce learning

- Training accessed through your own fully badged portal

We see enablement as critical to **bridging the gap between platform and practice** - helping teams create AI outputs that enable them to make decisions with confidence, and stay aligned on clinical priorities.

Designed Around Real Roles, Not Just Features

Our training approach focuses on practical, workflow-based learning that connects directly to how teams actually work.

The approach ensures:

- Customers are able to create their own roles based on their needs by combining the eLearning modules

- Shorter, focused, and easier to retain

- Designed for both onboarding and on-demand use

- Updated with every major platform release

This ensures that training evolves alongside the platform- and that teams don't just know *what* to do, but *why it matters* to the broader clinical trial effort.

Flexible Deployment to Fit Your Operations

Our content and delivery model are designed to fit your infrastructure, user base, and pace of change. Enablement isn't one-size-fits-all; and neither is our approach. We meet teams where they are to ensure adoption that sticks.

Positioned for What Comes Next

Saama's training investment reflects a core belief: successful AI transformation depends as much on people as it does on technology. With ongoing updates, modular design, and built-in flexibility, our enablement program is built for impact- and built to last.

Why It Matters

Accelerates Time-to-Value
Well-trained users become productive faster, reducing dependency on support and minimizing onboarding friction.

Enables Role-Specific Impact
Training is mapped to real responsibilities, not just screens, so users understand not only how to use the platform, but when and why.

Strengthens Change Adoption
Training is tightly aligned with change management principles, enabling smoother transitions and increasing user confidence at every stage.

Keeps Teams Current
Programs are updated in sync with platform releases, with planned re-skilling pathways for new features and evolving workflows.

Ready to Experience the Difference?

We're happy to provide access to sample learning modules or walk you through how our enablement model can support your team's success.
