

## CLINICAL INTELLIGENCE SUITE *The Speed to Quality Results*

*Are your studies meeting your objectives?*

*Is database lock at risk due to outstanding queries?*

*Are there Adverse Events that may be a safety concern?*

### Comprehend's Clinical Intelligence Suite optimizes the clinical development processes that speed trials to quality results.

Comprehend's applications deliver powerful capabilities to intelligently unify, monitor, and analyze clinical data across CROs, studies and systems. Together, these capabilities are transformative in nature, enabling clinical research teams to improve speed, efficiency and data quality across the trial portfolio.

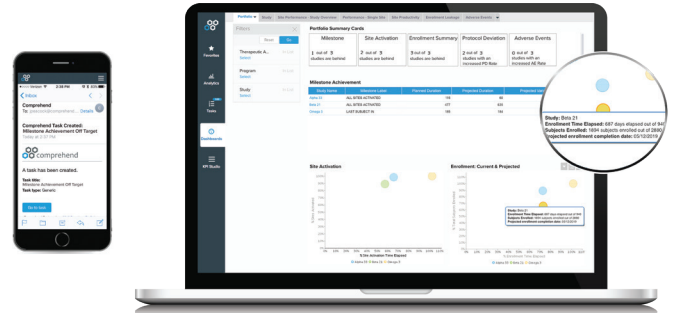

**ClinOps Insights** optimizes the enrollment and data quality processes that enable clinical teams to deliver milestones on-time. Across a study portfolio, Clinical Operations teams can now continuously see everything, focus on what matters, investigate deeply and act faster.

**ClinOps Insights with CRO Oversight** provides additional functionality to automate and continuously monitor quality agreements and oversight plans. ClinOps teams can now collaboratively and proactively manage key performance indicators with their CROs to successfully meet milestones.

**Medical Insights** is the first application to bring all safety and subject level data into a unified structure for consistent and proactive medical review and risk signal analysis. View real time analytics, easily filter to highlight data changes and manage tasks within each data report.

**Centralized Monitoring** available as an add-on, goes beyond traditional site monitoring to give teams continuous portfolio monitoring on their key risk indicators to significantly lower the time, cost and risk to deliver milestones on-time.

**KPI Studio**, available as an add-on, eliminates long turnaround times for Data Management teams. It provides access to all data for easily configured reports and analytics to meet study-specific reporting requirements.

**Includes Role-based Dashboards, 50+ KPIs, 150+ Analytics and Listings**

**Powerful Capabilities to Analyze and Interpret Patient Data**

### Choosing The New Speed to Quality Results

Comprehend offers a suite of Clinical Intelligence applications that enables ClinOps executives, Data Managers and Medical Monitors to significantly improve the speed, safety and quality of clinical trials across studies, systems and sites. Comprehend gives Sponsors and CROs the ability to address the most difficult and complex FDA guidelines for quality, risk and oversight.
