

Interactive Review Listings (IRL)

Gain Control of Your Data Review Process with AI-Powered, Cross-Source Clinical Review

Saama's Interactive Review Listings (IRL) empowers clinical data managers, medical monitors, and study teams to execute comprehensive data reviews within a single, unified environment. IRL modernizes clinical data oversight by enabling collaborative, multi-role workflows that connect data managers, medical reviewers, safety teams, and vendors. By eliminating reliance on fragmented spreadsheets and lengthy custom programming cycles, IRL provides central visibility, standardized tracking, and rapid exploration of multi-source clinical data.

Benefits

Accelerate Operational Throughput

Reduce dependency on clinical programming teams by enabling direct, self-service creation of data review listings.

Maximize User Autonomy

Lower daily workflow friction with a modernized interface designed for fast screen load times and intuitive navigation.

Shorten Review Cycle Times

Accelerate the identification, investigation, and resolution of clinical data discrepancies through centralized task management.

Eliminate Context Switching

Combine disparate data streams from multiple source systems into unified listings for holistic patient-level and study-level review.

Strengthen Vendor Governance

Streamline collaboration with external vendors by utilizing secure, role-restricted workspaces that protect trial integrity.

Features

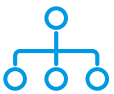

Consolidated Cross-Source Review

Unifies incoming data from multiple clinical systems into interactive listings, allowing teams to filter and investigate data at scale without static extracts.

Enhanced IRL Patient Profiles

Provides specialized multi-source data visualization screens tailored to the distinct review patterns of medical and safety monitors.

Centralized Discrepancy Management

Tracks all generated queries, tasks, and findings within a single interface to ensure consistent resolution workflows.

Modernized Interface Workflows

Employs a fully refreshed, high-speed user experience designed with consistent UI patterns across the entire Saama ecosystem.

Controlled Vendor Collaboration

Restricts external vendor activity to assigned tasks within bounded workspaces, eliminating the need to grant full study access.

Audit Trail and Compliance Logging

Compiles a complete, unalterable history of listing modifications, user actions, and sign-offs to maintain continuous inspection readiness.

The Saama Difference

Saama's Interactive Review Listings (IRL) empowers clinical data managers, medical monitors, and study teams to execute comprehensive data reviews within a single, unified environment. IRL modernizes clinical data oversight by enabling collaborative, multi-role workflows that connect data managers, medical reviewers, safety teams, and vendors. By eliminating reliance on fragmented spreadsheets and lengthy custom programming cycles, IRL provides central visibility, standardized tracking, and rapid exploration of multi-source clinical data.
